To Whom It May Concern:

The Riverside Resort Hotel & Casino suffered from a chronic infestation of pigeons, especially in the RV Park adjacent to the hotel. Maintenance staff tried for years to rid our property of the pest birds but some always got away and subsequently returned with more of their friends.

Instead of trying to trap, shoot or poison the birds we looked at the idea of putting them on "birth control", a new product specially designed to keep pigeons from reproducing. We installed an automatic feeder and after one year there were no pigeons left at our site. The product really did the job of cleaning up the problem.

We can recommend the use OvoControl for pigeons. It certainly solved our pest bird issue once and for all.
